Julio Jimenez Studio – Image Specs & Delivery

Effective Date: 2026

Overview

This document outlines standard image specifications and delivery practices for Julio Jimenez Studio product photography. Final specs may vary by project and will be confirmed in your agreement.

Standard deliverables (typical)

Unless otherwise specified, final images are delivered as:

- **JPEG (sRGB)** – high-quality for e-commerce and marketing
- **Resolution** – sized to your platform needs (commonly 2000–4000px on the long edge)
- **Background** – pure white or clean neutral (as agreed)
- **Color** – edited for accurate representation within reasonable display limits

Optional deliverables

Available by request and may affect pricing:

- **Transparent background PNG** (cutouts)
- **TIFF** for print workflows
- **Web-optimized set** (smaller files for faster site load)
- **Clipping paths / masks**
- **Layered source files** (PSD) if purchased

Cropping & framing

We aim for consistent framing across a product set (e.g., centered, matched scale, consistent padding). If you have a platform template or safe-area rules, provide them before the shoot.

- Square (1:1), vertical (4:5), and standard landscape crops can be provided when requested.
- For marketplaces, we can match their requirements (background, margins, max size) when supplied.

File delivery method

Delivery is typically via a secure download link (e.g., Google Drive/Dropbox) or a client-provided upload destination. Large projects may be split into multiple deliveries.

- You'll receive a folder that includes FINAL files and any requested alternates (WEB, PNG, etc.).
- We recommend downloading and backing up assets promptly for your internal archive.

Revisions & resizes

Minor revisions that align with the agreed shot style are usually straightforward. Significant reshoots or changes in direction may require additional time and fees.

- If you need new crops/sizes for a different platform, ask—batch resizing is easy when planned.
- Keep an example link or screenshot of where images will live (site template, PDP, Amazon listing).

Retention

We typically retain working files and exports for a limited period. If long-term archiving is important, request an archive deliverable or provide your preferred storage location.
